

OS Lab 03 Tasks

Task 1

1. Create a bash script named Intro.sh
2. Ask the user for his/her name by echoing "What is your name?"
3. Store the name in a variable.
4. Similarly ask for Intake number, section, id separately and store them in separate variables.
5. Print the stored variable in the following way:
Name: John Doe
ID: 20214039587
Intake: 48
Section: 2

Task 2

1. Create a sh file named Operator.sh
2. Take input 2 numbers while invoking the script file.
3. Print the addition, subtraction, multiplication and division operation of the 2 numbers.

Task 3

1. Create a sh file named Greater.sh
2. Take input a number while invoking the script file.
3. If the number is greater than 100, print "CENTURY"
4. Else print "Getting There"
